

RITESH HONULE

Software Engineer | Backend (Python & Nests) | 1+ Year of Experience
riteshhonule@gmail.com | +91 88612 20023 | Belagavi, KA

PROFESSIONAL SUMMARY

Full-Stack Engineer with 1+ years of experience building production-grade web applications using Python (Django, DRF) and Node.js (NestJS) on the backend, along with modern frontend technologies including React.js. Delivered a live ERP platform — owning end-to-end development including API architecture, React.js based frontend development, frontend-backend integration, JWT/RBAC authentication, database schema design, and AWS deployment. Comfortable with query optimization, scalable system design, and building efficient data flows across the stack. Seeking full-stack roles at product-led companies where engineering quality and ownership are valued.

TECHNICAL SKILLS

Primary Stack: Python 3, Django, Django REST Framework (DRF), PostgreSQL

Secondary Stack: Node.js, NestJS, TypeScript, Prisma ORM, MySQL, MongoDB

Data & Libraries: Pandas, NumPy, Scikit-learn

API & Auth: REST API design, JWT (access + refresh tokens), RBAC, OAuth2, Postman, Swagger

Frontend: React.js, JavaScript (ES6+), TypeScript, Tailwind CSS, HTML/CSS

Cloud & DevOps: AWS (EC2, S3), VPS/Linux, Git, GitHub, CI/CD basics, Docker (Basics)

Design & Practices: Modular architecture, service/repository pattern, schema design, query optimization, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Engineer · Gmark Software Solutions, India

Jan 2026 – Present

- Architected a stateless, modular REST API layer across 5+ ERP modules (orders, Master data, Inventory, reports) using NestJS + TypeScript + PostgreSQL + Prisma ORM. reducing average API response time by 35%.
- Designed and documented 30+ REST endpoints with a service/repository pattern, consistent pagination, input validation, and structured error responses — reduced frontend integration time for new modules by 40%.
- Implemented JWT-based auth with access/refresh token lifecycle and RBAC across 3 permission levels (admin, manager, staff); built token revocation via server-side blocklist — zero privilege-escalation incidents since launch.
- Integrated Razorpay and PayU payment gateways; handled webhook verification, idempotency-key deduplication, and reconciliation flows to prevent double-processing.
- Led AWS/VPS production deployments; introduced structured logging with correlation IDs and error tracing.
- Built React.js dashboards with KPI cards and chart visualizations, replacing manual spreadsheet reporting for client operations teams.
- Participated in 2-week Agile sprints; conducted peer code reviews and maintained API contracts via Postman collections.

Full Stack Developer · Olympiad Examination Council (OEC), India

Jan 2025 – Dec 2025

- Engineered and deployed a production-grade backend for an educational platform using Django and Django REST Framework, serving thousands of users.
- Integrated Razorpay and PayU payment gateways with webhook handling and API signature validation, enabling secure, real-time payment processing.
- Implemented backend security layers including rate limiting, input sanitization, and admin-only endpoint guards to protect user data and prevent abuse.
- Deployed and managed backend services on VPS and Shared Hosting via Apache/Nginx with 99% uptime, handling production monitoring and debugging.
- Optimized MySQL database schema and queries, improving query performance and reducing server load under peak traffic.
- Participated in Agile sprints, led API planning sessions with cross-functional teams, and enforced Git branching strategies for stable releases.

CERTIFICATIONS

- Full Stack Development — Infynow Software Solutions
- Artificial Intelligence — NoviTech R&D Pvt Ltd
- Hackathon Participant — Jain College of Engineering

PROJECTS

ERP Management System *NestJS · TypeScript · PostgreSQL · Prisma ORM · React.js*

- Built an ERP system with separate modules like orders, Master Data, and inventory. Used clean architecture to keep business logic and database code separate.
- Built a normalized PostgreSQL schema (3NF) with soft deletes and audit trails; replaced offset pagination with cursor-based pagination on bulk-export endpoints — eliminated full-table scans at large data volumes, improving retrieval time by 60%.

PhishShield — Phishing URL Detection API *Python · Django · DRF · Scikit-learn · Pandas*

- Engineered a feature-extraction pipeline parsing 15+ URL signals (lexical, host-based, structural); used trie-based prefix matching for efficient domain pattern lookups alongside an ensemble of rule-based and ML classifiers.
- Exposed the classifier as a standalone DRF microservice with clean JSON contracts — decoupled from any consumer, designed for plug-in integration into browser extensions or security tooling.

Decentralized Pre-Confirmation Network (DPN) *Solidity · NestJS · TypeScript · React.js · MySQL*

- Created smart contracts for blockchain-based validation and staking.
- Built backend service to store blockchain events into MySQL. Developed APIs to access blockchain data for analytics.

EDUCATION

Master of Computer Applications (MCA) (2025) | CGPA: 9.28

KLE Dr. M.S. Sheshgiri College of Engineering & Technology

Bachelor's Degree (2023) | CGPA: 8.32

Rani Parvati Devi College, Belagavi

PUC (12th) (2020) | 80%

Rani Parvati Devi College, Belagavi

SSLC (10th) (2018) | 82.56%

Thalakwadi High School, Belagavi
